

Cloudfm welcomes new COO driving digital transformation

3 years ago

Cloudfm is delighted that Terry Mills has been promoted to the new role of chief operating officer to support its business' growth plans in the UK and overseas. The move is part of Cloudfm's aim to lead digital transformation in the industry.

Terry Mills joined Cloudfm last year as technical services director. He is now promoted to the board and leads Cloudfm's transition to technology and data-led total asset care. He will lead one of the most experienced and creative teams to be formed within the industry.

Jeff Dewing, CEO, said: "Terry's appointment brings a wealth of experience to Cloudfm's operations and supports our goal to become a global leader in technology-driven total asset care. We have invested and developed a proprietary technology and delivery model that drives sustainability and creates efficiencies through predictive maintenance, transparent supply chain management and local sourcing. Increasingly we are seeing large companies embrace this approach as part of their plans for net-zero."

As Cloudfm continues advanced trials with the NHS, casual dining, and various other verticals during the Covid period using our new platform Mindsett, which challenges all previous thinking around smart buildings and IoT.

Commenting on his new role, Terry said: "I'm looking forward to working with a talented team to evolve maintenance, asset management and sustainability across the facilities management sector. Cloudfm is leading the industry with innovations in technology, data analysis and an approach to the market that will accelerate change."

Terry is responsible for business development and commercial operations and ensures quality and client

success across operations and the supply chain.

He is a UK chartered building services engineer, and before joining Cloudfm, had a 15-year career with ISS, where he was group vice president, responsible for enterprise and corporate development. His focus was to develop client-specific multi-country facilities management solutions for leading global brands.
