

“Technology and FM: An Underdeveloped Relationship” : DMA Group releases white paper

3 years ago

The facilities management (FM) industry is behind the curve when it comes to smart technology adoption, according to DMA Group.

Our own research has discovered that many in the industry feel confident that smart technologies could save time and money, as well as unlock service delivery improvements. However, just a small minority feel that their organisation’s FM and property teams are exploiting the full advantages of smart tech and business process automation.

Our new white paper, *Technology and FM: An Underdeveloped Relationship* examines the current state of play and explores in-house and outsourced FM professionals’ knowledge and adoption of “smart” technology.
