

PTSG works with Ministry of Defence

3 years ago

[Premier Technical Services Group Ltd \(PTSG\)](#) has been working at a Ministry of Defence (MOD) site to deliver specialist water treatment services.

The Group has worked with the MOD previously to deliver other specialist services. In September 2019, engineers from [PTSG Electrical Services Ltd](#) installed lightning protection at MOD Lyneham (buildings B190 and B192).

In this latest contract, [PTSG's water treatment](#) engineers are installing an X-Pot® Side Stream Filtration. In closed water systems, a build-up of solid material and sludge can affect chemical treatment programmes, causing poor performance and potential blockages. This is all avoidable.

Modern heating and cooling systems are commonly designed with high efficiency heating and cooling water generators. The X-POT ® contains incredibly powerful magnetic filtration along with fine cartridge or bag filtration (X-POT XP). It is designed to tackle commercial systems, from the small to the very large, which include heavy industrial applications.

PTSG offers a complete solution for supply, installation, and service of the X-Pot® side stream filters onto all types of closed system. This helps organisations conform to the advice from BSRIA in BG29 and BG50.
