

Industry invited to transportation infrastructure webinar

3 years ago

Composites Construction UK is inviting the industry to register for the latest in a series of webinars, which will concentrate on transportation infrastructure.

It will take place on 14 April, and the webinars run every other Thursday.

Composites Construction UK is a specialist contractor that has more than 25 years of experience in structural strengthening, concrete repair and the carbon fibre strengthening industry. It operates throughout the UK and Europe. As well as transportation infrastructure, Composites Construction UK works in waterfront, buildings, pipeline & liquid storage and power & energy.

During the webinar, Composites Construction UK will showcase what it can strengthen in transportation infrastructure. It will take its audience through the design principles of carbon fibre strengthening and discuss its most recent project examples.

Carbon fibre strengthening, or CFRP for short, involves using materials developed from natural carbon fibre to reinforce, rehabilitate, and repair buildings, structures, or existing structural elements.

Other upcoming seminars include:

- Buildings – 12 May
- Common Mistakes in FRP Strengthening – 26 May
- All Sectors – 9 June
- Project Focused (key projects completed between 19-21) – 30 June
- Power & Energy + Pipelines – 14 July
