

Infinity invests in environmentally friendly fleet

3 years ago

Norse employees working for Infinity may now be undertaking their vital property compliance and maintenance work from new, much more environmentally friendly vans.

Dean Kendall, Head of Infinity, said the 22 new Ford Transit Custom vans all met the latest Euro 6 standards and had other environmental features.

“These new vans will transport our workforce around the country so they can undertake the essential property compliance and maintenance works that they carry out for clients,” he explained.

“At the same time, they will be increasing our Infinity brand awareness and are equipped with all of the requisite mod-cons to allow our staff to travel in comfort.”

The vans are powered by advanced, high-performance Ford EcoBlue diesel engines, with systems designed to reduce fuel consumption and improve economical driving.

“Due to the rapid expansion of our business we were having to use more hire vans,” Dean continued.

“We have now been able to replace these and have a total fleet of 36 vans, enabling us to serve our clients even more efficiently.

“In the near future, we will be looking to replace a further six vans – and these will all be fully electric.”

Part of Norse Commercial Services, Infinity provides a range of property compliance and management solutions, from mechanical and electrical installations and maintenance to asbestos and legionella services.
