

PTSG is the clear choice for work at SPECS building

3 years ago

Premier Technical Services Group Ltd (PTSG) is to deliver specialist electrical services at a landmark five-storey development at the University of Hertfordshire.

In November 2021, the University announced that construction will begin on a new multi-million pound, highly-sustainable development on the College Lane Campus in Hatfield.

Set to be the largest single building at the University, the new development will provide a state-of-the-art, five storey home for the School of Physics, Engineering and Computer Science (SPECS) when it is completed in 2024.

Extending beyond 15,000m², the multi-purpose building will provide sector-leading facilities for staff, students and business including large Conceive-Design-Implement-Operate (CDIO) spaces, workshops and laboratories as well as flexible teaching and learning environments. The finished development will allow for greater collaboration and innovation and help drive the institution's renowned research and commercial capabilities further.

Engineers from PTSD Electrical Services Ltd will install a brand-new lightning protection system at the redeveloped town centre, providing protection for both buildings and users alike in the event of an electrical storm.

PTSG is the nation's leading provider of lightning and surge protection services. It's engineers deliver standard and bespoke design and installation services as well as testing and inspecting systems, with follow-up repairs and maintenance work for customers in all sectors around the UK.
