

Inviron strengthens its Net Zero offering with Connect

3 years ago

As part of its ongoing quest to support the UK's Net Zero ambitions, [Inviron](#) has further enhanced its ability to remotely optimise and adjust building systems with the 'acquisition' of the Connect Energy Team, and digital platform, from its sister company Breathe.

This move, which completed on the 1st August, followed a Group wide strategic review that set out to accelerate Inviron's efforts to expand its capability in this key area.

Connect is a team of energy experts who provide remote Energy Monitoring and Optimisation Services, offering clients a smarter way to manage their portfolios. Connect utilises digital software and technical knowhow, ensuring reduced energy consumption and a sustainable approach to remedial activities.

Several Corporate and Public sector clients continue to benefit from Connect's energy efficient remote monitoring solutions, and given the current energy cost challenges the uptake for this offering is expected to increase substantially.

Noel Clancy, Managing Director Inviron, commented: "We are delighted to welcome the Connect team into Inviron. Their capability and technical platform are a great addition to our portfolio of services and compliments our other digital asset platforms. At a time when reducing carbon and energy spend is at the top of everyone's to do list, we expect the take up of this offering to be significant particularly for clients with multi-site portfolios"

Jonathan Kershaw, Managing Director Breathe, commented: "Connect has been successfully delivering energy and carbon reduction services through remote control and optimisation for Inviron's clients, so the transition of the team to Inviron makes perfect sense. I look forward to seeing the ongoing development of

the Connect solution and Breathe will continue to work with the team on existing and future projects.”
