

[phs launches new bundle range to reduce business' compliance costs](#)

4 years ago

[phs Compliance](#) has launched a new range of testing bundles to help businesses cut the cost of their electrical and fire safety obligations.

The Compliance Testing Bundles allow businesses to select from 12 different packages of PAT tests, fixed wire electrical tests and fire safety tests, with some bundles offering savings of up to 40% compared to individual test prices.

The testing bundles also aim to minimise disruption for businesses by carrying out the different compliance assessments on the same date, ensuring minimal downtime.

“It’s about helping our customers carry out vital compliance duties in the most efficient and cost-effective way,” said Tracy Burtwell, Managing Director of [phs Compliance](#). “We find a lot of businesses have separate companies carrying out their different electrical inspections and fire risk assessments, at different times of year for each test, and that is a really expensive way of staying compliant.

“Our Compliance Testing Bundles combine the key tests required to ensure businesses are meeting the legal obligations – PAT tests, fixed wire electrical tests and fire equipment safety tests. These ensure businesses are fulfilling their duty holder obligations, which are outlined in the [Electricity at Work Regulations 1989](#) and the relevant health and safety and fire safety regulations, including England and Wales’ [Regulatory Reform \(Fire Safety\) Order 2005](#).

“By pulling these tests into packages, we can offer significant savings to our customers, both in terms of price and time. There are 12 different bundles which include electrical testing and emergency lighting, thermal imaging, fire alarm testing and fire extinguisher servicing and testing. They are designed to offer

the best deal whatever your business needs.”

With over 50 years’ experience, phs Compliance is one of the UK’s leading providers of facilities management and compliance services with over 400 engineers across the UK.

As well as electrical, mechanical and fire safety testing and maintenance services, phs Compliance also provides specialist electrical and mechanical project services, including design, supply and installation for everything from small power and lighting, to large electrical fit outs.
