

phs Compliance makes first electric vehicle appointment as business grows

3 years ago

[phs Compliance](#) based in Warrington has appointed a dedicated General Manager for Electric Vehicle Infrastructure, as the leading compliance provider expands its electric vehicle division nationwide.

Natalie Morden has been with the phs Group – which phs Compliance is part of – for the last eight years, working in the hygiene division as the Midlands Regional Sales Manager. She makes the move to the newly created role of General Manager EV Infrastructure for phs Compliance as the business continues to grow its electric vehicle charger installation services.

Natalie said: “As the government works towards banning the sale of petrol and diesel cars by 2030, the demand for electric vehicle chargers is growing. Businesses are introducing more electric vehicles to their fleets and taking a positive CSR-based approach to their operations.

“This emerging market compliments our current suite of compliance and building engineering services, so it is an exciting opportunity for us as a business and for me personally. I was ready for a new challenge, having been in role for some time and creating a successful team within the hygiene division. I was keen to remain with phs Group as it is a fantastic company to work for. This new role offered me the perfect opportunity and I’m looking forward to leading our EV strategy and exploring the different avenues the market can offer”

Tracy Burtwell, Managing Director of phs Compliance, said: “We have been offering electric vehicle charging unit installations for a number of years and we are excited to start focussing on expanding that side of the business further. Natalie is a key appointment in our growth strategy, and we look forward to the fresh approach and sales expertise she brings with her to the role.”

All phs Compliance electric vehicle chargers are installed using a team of fully qualified electrical engineers. As part of its partnership with leading EV charging unit supplier ROLEC, phs Compliance is registered with the government's OLEV – the Office for Low Emission Vehicles – scheme.

[phs Compliance](#) is one of the UK's leading providers of workplace compliance and building engineering services, with the largest team of specialist statutory testing operators in the industry.

As well as EV services, it provides statutory electrical services including testing (EET tests, EICR and fixed electrical testing), inspection services, maintenance, and remedial work.

phs Compliance also offers a comprehensive project design, installation, commissioning and maintenance service for fire and security systems.

With over 400 engineers across the UK, phs Compliance delivers more than 14 million compliance inspections for 35,000 customer sites nationwide every year.
