

PTSG comes in handy at London's Handyside Street

2 years ago

[Premier Technical Services Group Ltd \(PTSG\)](#) has completed a specialist building services project at office building Q1 in Handyside Street, King's Cross.

The building was designed by Coffey Architects and sits above the Network Rail Gasworks tunnels on the corner of York Way and Handyside Street. The design has been borne out of the constraints of the tunnels below, but this has led to some real creativity that draws on the industrial heritage of the site. The façade is a silver perforated aluminium that sits well with the neighbouring buildings along York Way with the black and greys of the King's Cross Sports Hall and Arthouse.

PTSG's [high-level engineers](#) attended the site to undertake a glazing replacement project.

All businesses depend on presentable and well-maintained premises. Damaged and broken glazing can be a major inconvenience, even forcing closure and lost time.

Premier Technical Services Group Ltd (PTSG), as the UK's leading provider of specialist services, delivers glazing replacement services for customers in all industry sectors throughout the UK. Its engineers can attend same-day call-outs, even if the call is received early morning, late evening or at the weekend.
