

PTSG to be part of London Mosaic

4 years ago

[Premier Technical Services Group Ltd \(PTSG\)](#) has been contracted to provide specialist fire solutions at Mosaic Place in London.

Mosaic Place is a mixed-use development that creates a new civic identity at the centre of Purley in South London. The development will provide significant new facilities for Purely Baptist Church and 114 new homes, set within a low to medium rise courtyard blocks as well as 17 storey landmark building.

Purley Baptist Centre seeks to re-establish a new and enlarged community facility within the heart of the town centre, providing a new agora or meeting ground within which various activities can take place. The new facilities will make a significant contribution towards the public realm, with ground floor spaces that include a large double height entrance and exhibition foyer, a community cafe, a large multipurpose hall, a youth centre, the Purley Cross Centre (a drop-in resource centre for the community) and a lettable retail unit.

Engineers from [PTSG Fire Solutions Ltd](#) will deliver commercial sprinklers at the new development. Sprinklers are widely acknowledged to be the most effective form of fire suppression in buildings.

First used in 1872, modern innovations have made sprinklers far more effective at combating fire. They are designed to protect property and people as specified by the various automatic fire sprinkler standards. Within commercial properties, the British standard BS EN 12845:2015 is used.
