

PTSG makes return visit to East Midlands Airport

3 years ago

[Premier Technical Services Group Ltd \(PTSG\)](#) has returned to East Midlands Airport to carry out vital electrical services.

East Midlands Airport is a vital part of the UK's travel infrastructure. The award-winning hub connects more than four million passengers to destinations across the globe – linking them to upwards of 80 leisure and business destinations.

The airport is also of crucial importance to its region, supporting over 6,000 jobs and generating about £300 million for the area. A major landmark, its control tower stands higher than 52 metres and oversees the sixth-longest civilian runway in the UK.

In July 2021, [PTSG's Electrical Services](#) engineers were contracted to deliver a test and inspection of the lightning protection system in place at East Midlands Airport. Its engineers have just completed another test and inspection to make certain the system conducts any lightning strike to a safe earthing point. This ensures compliance with the Electricity at Work Act 1989, BS 6651 and BS EN 62305.

Lightning protection systems, such as those at East Midlands Airport, are vital in protecting buildings from structural damage, as well as ensure the wellbeing of the people who use them.
