

Chair and vice chair for Young Engineers Network

3 years ago

The [Building Controls Industry Association](#) (BCIA) has announced that its Young Engineers Network (YEN) has elected its inaugural chair and vice chair.

E.ON Controls lead commissioning engineer Greg Smith has been elected to the position of chair, with InTandem Systems trainee control engineer Abbie Bewley in the role of vice chair. BCIA president Graeme Rees described the announcement as “a great step forward for the YEN”.

Established in April last year, the BCIA YEN provides an opportunity for the future talent of the BEMS industry to come together, network and to provide support to allow career progression. Having held three successful events and now with more than 200 LinkedIn followers, it hopes to build on its early success with its future now being directed by its members.

Mr Smith commented: “The YEN enjoyed a really positive start last year and it is a real honour for me to be elected as the network’s inaugural chair and to be given the chance to hopefully lead and inspire the next generation of young building controls engineers towards a successful career in the BEMS industry.”

Ms Bewley added: “I am very proud to have been elected as Vice Chair of the BCIA’s YEN and I look forward to working with Greg to build on the network’s progress so far. We enjoyed some really useful events last year and we will hopefully have some more organised for 2023.”

Mr Rees said he is excited about the prospect of the industry’s young talent taking on a prominent role in shaping the future of the building controls sector, commenting: “It’s a great step forward for the YEN to have appointed its own chair and vice chair and the enthusiastic engagement shown by the network’s delegates is very encouraging news for the industry. Better engagement has been a key aim for the BCIA

and I am delighted to see these young engineers taking the initiative and leading by example.”
