

## Interactive sensory tables launched for retirement living and care estate

3 years ago

[Elior UK](#) is rolling out the introduction of interactive sensory tables into its retirement living and care homes, following a successful trial at Anchor extra care locations.

The Mobi interactive sensory table is a fully portable projection system which can be used on any surface – a table, the floor or a bed – and users can engage in over 150 different activities ranging from painting flowers and walking through fish filled water to playing games such as football or shove penny. With emphasis on motion-activation, the inclusive sensory activities reward any level of participation and help to engage and motivate all generations on any surface.

Elior managing director for Health, Care and Residential Living Laura Tighe said: “We are always looking for innovative ways to enhance our offering for our clients and their residents and these interactive tables are a wonderful way to enrich the residents’ day and create a fun way for our team to interact with the residents in their care.”

Senior contract manager for Anchor Deborah Kenny said: “The response was fantastic at the locations where we trialled this incredible system. The tables instigated interaction, movement and positive engagement and had such an uplifting effect on many of the residents and even positively changed the behaviour of some residents.”

Omi designer Kevin Riley, the system’s creator, said: ‘The Mobii magic table was the first truly mobile motion-activated projection system that can project an expanding range of activities on to any horizontal surface at the touch of a button. We are delighted by the positive impact that our tables have on those who use them, especially individuals suffering from dementia.’

The Mobi interactive sensory table won the National Dementia Care Outstanding Project Award in 2018 for the opportunities and benefits that it created for people at all stages of dementia.
