

## PTSG completes works for Fire Service College

2 years ago

[Premier Technical Services Group Ltd \(PTSG\)](#) has completed a specialist project at an incident ground venue for The Fire Service College.

The 30-acre incident ground venue in Moreton-on-Marsh, in the Cotswolds, offers a world-class array of facilities enabling the Fire Service College to replicate building fires, urban search and rescue scenarios, train derailments, motorway pile-ups and even ship rescues.

This means that emergency services professionals can experience real live training situations and develop their skills and techniques all within a safe environment. The Fire Service College can also simulate multiple exercises to immerse them in highly realistic situations. The complexity can be increased over time so that they learn how to tackle long-term, highly challenging situations. This enables them to gain the resilience and endurance skills they need to be effective in whatever situation they face.

Operatives from [PTSG Building Access Specialists Ltd](#) have completed an inspection of four fire drill towers at the venue in Moreton-on-Marsh. In addition to performing inspections of buildings, PTSG can carry out a range of specialist building services including (but not limited to) building fabric maintenance and decoration, specialist façade cleaning, roof and gutter maintenance, steeplejack services.
