

PTSG performs tests at Queen's Hospital

2 years ago

[Premier Technical Services Group Ltd \(PTSG\)](#) has completed a specialist electrical services project at Burton Hospitals NHS Foundation Trust.

Queen's Hospital Burton is the principal provider of acute hospital services for the residents of Burton upon Trent and surrounding areas including South Staffordshire, South Derbyshire and North West Leicestershire.

At Queen's Hospital Burton, there is a full complement of Emergency Department, outpatient and direct access services, and all specialties are supported by a comprehensive range of clinical services in therapies, pharmacy, pathology, and radiology. There are two MRI Scanners, two CT Scanners, a dedicated endoscopy suite, a breast care unit, stroke facilities and modern maternity unit all on-site at the Belvedere Road hospital.

The hospital serves a population of approximately 360,000 people and is committed to delivering high quality patient care. Queen's Hospital Burton aims to be the local healthcare provider of choice with a mission to deliver the best patient experience possible.

In this contract, engineers from [PTSG Electrical Services Ltd](#) completed a test and inspection of the lightning protection system in place at the hospital, in line with British standards. If any areas are found to need maintenance in such inspections, PTSG's engineers are fully trained and experienced to carry out the necessary work to ensure the system remains fully operational.

PTSG is believed to be the oldest trading provider of lightning protection services in the UK and possibly Europe, due to JW Gray, one of its constituent companies, being established in 1835.
