

## Vycel 4 from Rawlins delivers a new standard in virus protection

2 years ago

Post-Covid, the world continues to grapple with the threat of infectious diseases, and it is clear that proper sanitation and disinfection are more important than ever. Fogging is a powerful tool that can help protect against the spread of germs and viruses by disinfecting multiple surfaces, hard-to-reach areas, and small confined spaces.

Leading UK cleaning equipment supplier Rawlins had launched Vycel 4, an easy-to-use and lightweight backpack electrostatic sprayer, that when paired with a water-based antibacterial solution, delivers a world-beating approach to pathogen elimination, giving them nowhere to hide.

"If you're a business owner, it is important to prioritise the health and safety of your employees and customers," says Rawlins Managing Director Werner du Plessis. "Our fogging solutions, such as Vycel 4, can benefit your organisation by helping you maintain a healthy and safe environment.

"Vycel 4 is intended to provide the best spray coverage to weight ratio for electrostatic sprayers, therefore saving time and money. From healthcare to gyms and schools, using Vycel creates the opportunity to properly sanitise and maintain a healthy and safe environment. And another benefit is that with all cleaning and hygiene services now being a front-of-house, rather than behind the scenes activity, Vycel 4 also looks great and highly professional.

"Vycel 4 uses micro water particles in the form of fog to provide wider coverage with deeper penetration than traditional sprays. We also recommend using Vycel 4 in conjunction with GermErase, a scientifically proven disinfectant that has been shown to destroy a wide range of germs, bacteria, pathogens, and viruses."

Easy to use with long run-time and battery life

Easy to use and refill, Vycel 4 features a comfort grip handle. It has a 4-litre capacity, giving a fluid run time of 40minutes. With a spray range of up to 2 metres, Vycel 4's high-performance pump provides easy room covering, and the electrostatic charged mist completely wraps surfaces for full coverage. Lightweight, the unit weighs just 3.2 kilos when empty and 7.2 kilos when full. The battery gives over three hours of run time with a simple swap and dock charging system, and the unit features an illuminated battery status indicator.

Compact and straightforward to use, Vycel 4 is up to 65% quicker than traditional trigger bottles and uses 75% less chemical solution. Plus, there is no need to wipe after application.

"Whatever your industry sector, Rawlins recognises that safeguarding your business, employees, and clients have never been more critical," concludes Werner du Plessis. "Using Vycel 4 provides reassurance that premises are healthy and above all safe."
