

YorPower teams up with Weatherhaven Global Solutions

2 years ago

[YorPower](#) has begun 2023 with a project that not only makes full use of its capabilities as a national and international provider of back-up power solutions, but also underlines its environmental credentials.

YorPower was recently asked to provide a quotation and plan to supply and deliver two 60kVA units by its client, Weatherhaven Global Solutions (Weatherhaven).

Weatherhaven are experts at designing, planning and implementing shelter and camp solutions across the world. They provide military camps, mobile medical shelter systems, and commercial camps, varying from mining to construction setups.

As Group Sales Director, Jordan Kincaid said: “It’s always great to work with companies that offer a service that helps people in need.”

This particular project required YorPower to deliver two [60kva Perkins diesel generators](#) to an island in the Indian Ocean, that will support the power of rapid deployment shelters that are manufactured and installed by Weatherhaven. These shelters can hold kitchens, dry goods, mobile hospitals and other relevant facilities. The generator sets were shipped in a container, alongside two battery chargers, six additional sockets and two road trailers for easy transportation once they arrive on the island.

YorPower has begun the process of becoming a net zero company, aiming to be the first organisation in its sector to achieve this. In a similar way, the team at Weatherhaven are keen on doing their bit to help the environment. All of their shelter designs are lightweight and compact, which helps reduce fuel consumption and transport time.

Mr Kincaid continued: “This is a great project for YorPower to take part in. Knowing that these generators will travel the world providing power to the volunteers supporting third world countries and war-torn areas

is extremely rewarding.”

YorPower specialises in the supply, delivery and installation of diesel generators. For all enquiries, please email sales@yorpower.com.
