

B-Sure Recycling's £70k investment solves customers' waste management problems

2 years ago

B-Sure Installations has invested over £70k to launch a new waste management company, B-Sure Recycling. The new enterprise helps customers reach waste management targets by providing a complete collection and recycling service of all types of business waste.

“How we manage waste is a huge business concern for everyone across all sectors from schools, manufacturing, retail and healthcare. Reaching recycling targets through circular economy solutions is a significant part of environmental goals for companies today,” explains Ross Chambers, Managing Director, B-Sure Installations. “All waste from cardboard and shrink wrap, to thrown out old dispensers and unwanted furniture, is collected and recycled at our newly-built B-Sure Recycling facility.”

B-Sure – which is based at Manor Business Park in Enderby Road, Leicester – has grown over the last 15 years to be a major installation company in the UK. B-Sure Recycling can now manage the waste recycling process from its installation projects including furniture, B-Spoke hygiene boards, dispensers and air conditioning units along with property maintenance. All waste items can be recycled at the B-Sure site where the company has recently installed two compactors and a high-tech granulator.

Customers are provided with bins and cages to collect waste at their sites. When these are full customers can either book a collection using our on line portal or arrange for a regular collection to be made by the B-Sure recycling team. Once collected then the waste transported back to B-Sure Recycling facilities. Metal waste is collated, wood-based waste is broken down and separated and plastic waste is granulated and bagged. The recycled materials are then provided to B-Sure partners who create it into new products such as mats, play areas, PVC windows, toys and many more new products. Some items such as office furniture, if they are in good condition, are refurbished or resized so that they can be reused, placing them back into

the circular economy.

“We can now offer a complete circular economy solution for all of our customers waste management needs,” adds Ross Chambers. “B-Sure Recycling can enable customers to complete its waste circle, saving them money, time and hassle within the manufacturing process and supporting the expansion of the business waste recycling infrastructure across the country.”
