

Corps Monitoring partners with Texecom for future-ready security

2 years ago

Corps Monitoring, a division of certified Social Enterprise, Corps Security, has partnered with leading provider of home and business security systems, Texecom Monitor to provide clients with a one-stop solution for signalling.

Texecom Monitor offers signalling to leading Alarm Receiving Centres and is part of Texecom's suite of digital solutions specifically designed to help professional installers grow and optimise their business. Digital integration with the Corps Monitoring Alarm Receiving Centre (ARC) provides a direct link with [Texecom Cloud](#) and [Texecom Monitor](#) solutions to protect people and property wherever they are by allowing security installers to sign up and put connections directly into one of the most advanced monitoring facilities in the UK.

This innovative partnership means installers can now easily sign up to Texecom Monitor and setup with Corps Monitoring from within the Texecom Cloud to provide immediate professional alarm monitoring, removing the time spent waiting for hardware to arrive and be installed as everything is managed from one platform – Texecom Cloud.

Access to these services lets installers raise service levels with remote maintenance and configuration, reliable encrypted monitored alarm signalling, more frequent health checks and anytime-anywhere access. The result offering increased revenue, reduced overheads, improved efficiency, and more satisfied customers while the specially designed *Texecom Connect* app lets clients access and control their security system directly from a smartphone or tablet.

Regarded as a leading global security company, Texecom is trusted by over 300,000 professional

installers, protecting over a million people and properties globally. As a technical partner, Texecom is now fully compatible with Corps Monitoring's alarm receiving centre (ARC) based in Glasgow and holds the National Security Inspectorate (NSI) Gold accreditation category 2.

The partnership comes ahead of the 2025 [switch off](#) of the UK public telephone network (PSTN) at which point domestic and residential customers must have upgraded to a fully digital solution. Texecom Monitor and Corps Monitoring provide a futureproofed solution which avoids any possible disruption.

Solutions director at Corps Monitoring, Gavin McCartney said, "We're constantly looking to ensure our clients have the options they need to be successful in this dynamic market. In partnership with Texecom, we're part of an innovative signalling product that can be quickly and easily ordered and set up through clients' existing Texecom Cloud Accounts."

Daniel Morrissey, ARC Partnership Manager at Texecom said, "During early discussions with Corps Monitoring it quickly became apparent that they had a requirement for a reliable, easy to install monitoring solution to better support both Corps Monitoring and their customers. With Texecom providing support at every step and with the quick and easy install of Texecom Monitor, plus the easy access via Texecom Cloud, I am delighted to be working with Corps Monitoring to achieve the above."
