

Inviron completes new EDF office refurbishment

2 years ago

EDF UK, a sustainable and responsible energy business, appointed Inviron's Project Delivery Team (PDT) as Principal Contractor to deliver a large scale CAT B refurbishment of their newest premises in Glasgow.

Working in a new way, EDF Property Services and Inviron, operated in partnership and successfully managed the following works over a timescale of 9 weeks:

- Strip out/adaption of M&E services
- Installation of new M&E services
- Construction of new meeting and operational rooms
- Construction of a new kitchenette
- Co-ordination of Furniture/AV & IT installations

Providing expert knowledge and adapting to changes in scope, the PDT worked collaboratively and effectively with the EDF Property Services team to complete the project without any delays to the agreed programme timescale. All whilst ensuring full compliance with EDF's Zero Harm initiative and the overarching Inviron Guiding Principles.

Ciaran Collins (Inviron, Head of Projects) commented: "This was an exciting project, one that required a great deal of focus to ensure all works were seamlessly co-ordinated, planned and executed effectively given the various challenges the team faced. The dedication and resolve shown by the team to achieve this fantastic result were exceptional. It was satisfying to see first-hand and be an integral part of the EDF/Inviron collaboration working at its very best to achieve this great result for our mutual client."

Clive Taylor (EDF, Strategic Works Delivery Manager) commented: "I would like to commend Inviron for their efforts. They worked very well with Property Services, helping us with solutions to issues as they

arose. Inviron picked up additional scope for us when others were not able to and were very receptive to the challenges as they emerged. I was pleased to be at the opening event when the EDF Executives were very praiseworthy of the outcome and everyone's efforts."
