

Lewisham development benefits from PTSG's specialists

2 years ago

[Premier Technical Services Group Ltd \(PTSG\)](#) has completed a specialist access project on a new build-to-rent development in Lewisham, South London.

The development will see the build of 322 apartments on Conington Road, split across two blocks on either side of the Ravensbourne river. There is also a 35-storey tower that will be topped by a roof garden, or sky deck, and have views towards the Surrey Hills.

With a view to the future of sustainable travel in mind, there will also be a new entrance to Lewisham Station created. This will give access to the DLR and rail services without the need for residents to use cars, in an already bustling area. The environmental performance is also being raised significantly, to achieve the BREAMM Excellent standard.

In this project, engineers from [PTSG Building Access Specialists Ltd](#) worked mainly on providing mastic joints, carrying out the work by rope access. PTSG's Building Access Specialists are skilled and experienced in all access techniques. They carry out a range of specialist building services including (but not limited to) building fabric maintenance and decoration, specialist façade cleaning, roof and gutter maintenance, steeplejack services.
