

NJC starts journey to an emissions-free fleet

2 years ago

NJC, the facilities management provider, has announced it is now running on greener energy as it has implemented electric vans into its business.

The move will see a reduction of 35.37 tonnes of carbon emissions annually. NJC is committed to an entire emissions-free fleet, however this is currently subjective to procurement issues currently in the market.

Moving to an electric fleet was not without challenges and you can read the company's carbon metric report for more details [here](#).
