

Service Works Global appoints BIM Consultant

2 years ago

Service Works Global (SWG), a provider of facilities, property and workplace management software, has appointed Radu Boeriu as a building information modelling (BIM) consultant.

Boeriu has 15 years of experience as a BIM Manager and an architect, having previously worked as a BIM and design system manager at international architectural practice, Foster + Partners, where he was responsible for helping the practice achieve BIM maturity while working on and pioneering BIM within the company. He has also worked on large, worldwide BIM implementation projects including Mexico International Airport and Shurayah Island.

At SWG, Boeriu will harness his industry and technical knowledge in the operational phase of contracts and support the commercial and development teams in driving forward the QFM BIMi product, SWG's BIM data and 3D modelling solution that allows users to easily access their building data.

Boeriu said: "Since studying architecture at the University of Architecture and Urbanism Ion Mincu in Bucharest in 2009, I have been committed to the successful design of buildings and how they operate. I look forward to supporting facilities and estates managers in delivering BIM processes throughout a building's lifecycle. It is a pleasure to join the SWG team as a BIM consultant and support the commercial and development teams moving forward."

Gary Watkins, CEO of SWG said: "Radu is already a real asset to the SWG team, and we are so pleased to have him on board. As a BIM consultant with numerous years of experience, Radu will play a pivotal role in driving our product strategy and supporting our customer base around the globe as they seek to harness BIM in the operational phase of their estates."
