

Truvox International focuses on floorcare at The Care Show

3 years ago

Visitors to stand # K21 at The Care Show 2023 at NEC Birmingham on 11/12 October will see the latest innovative floorcare solutions from Truvox International.

“Proper floorcare in a care home environment is essential as it makes a major contribution to health, safety and hygiene,” says Truvox International UK National Sales Manager Paul Robinson. “At The Care Show we will be demonstrating some of our latest floorcare machines which focus on ease-of-use and manoeuvrability, coupled with maximum reliability and performance.”

Ideal for use in the care home environment, the Multiwash™ PRO range of scrubber dryers wash, scrub and dry in just one single pass, so floors are left clean and dry, ready for staff, residents and visitors to walk on.

Delivering exceptional productivity, the Multiwash™ PRO is effective on all floors, from carpets and hard floors to entrance matting. The contra-rotating cylindrical brushes scrub and lift dirt, giving a more hygienic and deeper clean.

Also on show at The Care Show will be: the VTVe compact tub vacuum, which offers great performance with excellent manoeuvrability, and includes a HEPA 13 filter as standard; and the Hydromist Compact – a simple, manoeuvrable and effective all-in-one carpet cleaning machine for carpet and upholstery cleaning.

Visible cleaning reassures residents, staff and visitors

“Throughout and since the pandemic, cleaning routines have become more of a front of house activity,” says Paul Robinson. “So, the fact that the Multiwash™ PRO, VTVe – and all our machines – look so

professional is a positive benefit, and we know that visible cleaning reassures residents, staff and visitors.

“Some premises have dedicated cleaning operatives, but some care homes may rely on almost all personnel taking their turn in ensuring facilities are safe and hygienic. The ease of use of our floorcare machines is therefore another major reason for their popularity and success. For instance, using Multiwash™ PRO requires minimal training and people tell us that it is easier and considerably less messy than using a more traditional mop and bucket.

“Using a mop just spreads dirt around, while the Multiwash™ PRO will scrub and pick up the dirt into the tank which can then be easily emptied. Safety is always top of mind and majorly important in care homes, so the Multiwash™ PRO is designed to remove chemical residues and eradicates slip hazards.

“Manoeuvrability and ease of use are important considerations, so at The Care Show we will also be demonstrating the Valet Dual Motor Upright, a HEPA filtered upright vacuum, with two motors giving greater pick-up and improved carpet appearance.

“If you want to discover how to improve floorcare in care homes, we look forward to welcoming you to stand K21 at The Care Show, where you can try each of our machines for yourself,” concludes Paul Robinson.
