

PTSG given green light at new East London development

3 years ago

[Premier Technical Services Group Ltd \(PTSG\)](#) will deliver specialist electrical services in the initial stages of Dagenham Green, a huge home-building development.

In the first phase of the Dagenham Green project, the building of 935 homes is planned on the site of the old Ford stamping plant, subject to agreement from the Environment Agency.

Delivered across multiple phases, the development will deliver more than 3,500 homes, 1,640 of which will be affordable tenures for local people to rent and buy. Phase one will bring forward just over a quarter of the total new homes, and of these 935 homes, 35 per cent of which will be affordable.

Homes will be centred around these green open spaces, including a new urban park which will include a large pond to reflect the area's waterside heritage with a boardwalk, framed by terraces, and open space. There will also be children's play space inspired by the water and natural landscape, and a market square to connect Dagenham Green to the nearby Dagenham Dock railway station.

In the first phase of the development, engineers from [PTSG Electrical Services Ltd](#) will deliver lightning protection to protect the new structures and all users in the event of an electrical storm.

PTSG is the UK's leading provider of lightning protection services. Its engineers are at work throughout the nation, delivering test and inspection, repairs, upgrades and brand-new bespoke or off-the-shelf lightning and surge protection systems. PTSG serves clients in all industry sectors.
