

Reliance High Tech are Security & Fire Excellence Awards 2023 Finalists!

3 years ago

[Reliance High-Tech](#) is pleased to have been nominated as a finalist for not one, not two, but three awards in the Security and Fire Excellence Awards this year!

We are up for the prestigious Installer of the Year award, having been a previous winner twice before, most recently in 2020. This year, the nomination cites our ongoing work with Luton Borough Council and the visit of King Charles III to the town in particular. This required us to work very closely with Luton Borough Council and Bedfordshire Police to develop a covert, adaptive and technology-driven security strategy that prioritised operational effectiveness.

Reliance High-Tech is also a finalist in the Customer Care Initiative of the Year category for its work with University College, London (UCL), where it was responsible for the design, installation and commission of cutting-edge technology across the entire UCL estate - technology that could be remotely monitored and managed through a centrally located control centre.

Finally, we are also a finalist in the Security Project of the Year category for our work helping Marsh McLennan Companies (MMC) implement a modern integrated security system that could complement the move towards smarter working spaces at the firm's prestigious 1 Tower Place offices in central London.

Alistair Enser, CEO of Reliance High-Tech, said: "We are extremely proud to have been nominated as finalists again this year in these three categories, which build on our previous nine wins across various categories. This recognition reflects our commitment to developing the best trained and most highly motivated team in the security industry and our understanding of customer needs and the technology that can support them."

Winners will be announced at the Security & Fire Excellence Awards on Monday, 04 December 2023, at JW Marriott Grosvenor House on Park Lane, London.
