

Hybrid solar CCTV towers introduced by Kingdom Systems

2 years ago

Security solutions provider [Kingdom](#) Systems has announced the expansion of its client base with the successful implementation of its cutting-edge hybrid solar CCTV towers. These are designed to reinforce the commitment by the company to providing best-in-class service.

The towers have been installed at sites across the country, increasing security and safeguarding valuable assets for clients – harnessing the power of solar energy, they provide innovation in sustainable and efficient security infrastructure.

A dedicated internal monitoring team will oversee the camera system, ensuring 24/7 surveillance and immediate response to any security incidents. Mobile response units are strategically positioned to swiftly address any security breaches, delivering an added layer of protection and peace of mind for clients.

Director of service Paul Worsley said: “At Kingdom Systems, our priority is to provide our clients with the highest level of security, allowing them to focus on their core objectives without worry.

“Our hybrid solar CCTV towers are a testament to our dedication to innovation and excellence in the systems sector, as well as being leaders in sustainability and providing the best-in-class service that Kingdom is renowned for.”
