

Solar PV system embraces sustainability and environmental responsibility

2 years ago

ATEN International, the parent company of [ATEN Technology](#), announced that it completed a solar PV power generation system with a 334.8KWp capacity at its Thailand factory. This is part of its drive toward achieving net-zero carbon emissions globally by 2050, emphasising a unified, worldwide effort and underscoring its firm commitment to sustainability and environmental responsibility.

Furthermore, it has completed the greenhouse gas inventory for all subsidiaries within the group this year, marking a new starting point in its journey towards environmental sustainability.

As the urgency of the climate change crisis deepens, the company said it is committed to corporate social responsibility and is taking substantive action. It has set its sights on achieving net-zero carbon emissions by 2050 and has fully devoted resources towards substantial carbon reduction initiatives.

In the shorter term, it has plans to reduce carbon emissions by 50% at its Taiwan headquarters and Xizhi production base by 2030.

These ambitious goals have been outlined in a series of precise action plans, one of which includes a substantial investment in energy conservation and renewable energy solutions. In 2021, the company marked a significant milestone by implementing a solar photovoltaic power generation system in its Thailand factory. The system, with a capacity of 334.8KWp, began mass production in 2021 and entered trial operation in November 2022. Further demonstrating its commitment, it also built a solar photovoltaic power generation system with a capacity of 170KWp at its Xizhi factory headquarters. The system was officially operational by the end of the year, marking a substantial step towards its sustainability goals.

“ATEN is resolutely committed to sustainability and environmental responsibility to reduce carbon

emissions,” said president Kevin Chen. “In essence, we’re not just making strides towards a greener operation – we’re passionately influencing our employees and supply-chain partners to embrace and champion a greener lifestyle. Together, we’re paving the way for a more sustainable and eco-friendly future.”
