New 'smart' software solution for FM professionals introduced by SFG20

2 years ago

Building maintenance standards provider SFG20 has launched a software solution designed to address the 'once in a generation' challenges facing the FM industry.

Facilities-iQ, reported to be a completely new 'smart' software solution, has been designed to aid regulatory compliance, improve auditing, and deliver better collaboration between building owners, managers, maintenance teams, contractors, and consultants.

The new product has been launched to help users stay on top of ever-changing legislation and regulation whilst also routinely managing maintenance tasks and their financial and technical risks. FM professionals will also find the content available through Facilities-iQ will also support them in striking the right balance between compliance and business criticality.

The launch has followed a rigorous development process guided by the findings from FM professionals who shared the unprecedented challenges they'd experienced from a barrage of new legislation.

The Fire Safety Act 2021, The Building Safety Act 2022, and the Fire Safety Regulations (England) 2022 are just three examples of how legislation has shifted priorities and responsibilities for everyone involved in the maintenance of built assets.

A major benefit of this new smart software solution for FM professionals is that it allows users to tailor SFG20 content to suit the unique needs of their facility, while still benefiting from automated update notifications whenever SFG20 content is updated to align with regulatory landscape changes. This means users can update the library of best practice and compliance information combined with their own unique knowledge of a site and its assets. This will help them accurately target resources, including external contractors, to minimise costs and improve efficiency.
Managing director Kirsty Cogan said:"This launch is very much in tune with this new era of digital facilities management.

"We have come a long way from the paper-based schedules created by those pioneering HVCA members whose work was also revolutionary in its day.

"Today's industry can now harness the power of the latest software tools to transform the way they manage their valuable and complex assets. As well as helping them achieve compliance with their increasingly onerous regulatory responsibilities, Facilities-iQ is a great way for FMs to provide evidence of how their work adds value by making our built environment safer, healthier, and more comfortable."

Facilities-iQ will be available on Wednesday 31st January.
