

Celebration Packaging introduces new range of tamper-evident food packaging made from rPET

2 years ago

[Celebration Packaging](#) has introduced a new range of tamper-evident food packaging made from a minimum of 30 per cent recycled PET.

The new range, introduced under Celebration Packaging's SolutionWare brand, includes sandwich packs, rectangular salad containers with hinged lids, and deli containers with separate lids.

"Our new ranges of high-clarity tamper-evident food containers feature a patented safety lock lid, giving tamper proof protection to prepared foods," says Celebration Packaging Managing Director Nick Burton. "These new ranges are manufactured with a minimum of 30% post-consumer rPET recycled plastic, and are therefore not liable for the plastic packaging tax. Once used, the packaging can be rinsed and recycled through kerbside collection."

Both the rectangular tamper-evident rPET salad containers with hinged lids, and the square tamper-evident rPET deli containers, with separate lids, are available in 8oz, 12oz, 16oz, 24oz and 32oz sizes. An rPET tamper-evident triangular sandwich pack with hinged lid is also available.

Celebrating 40 years of innovative off-the-shelf packaging solutions

Celebration Packaging has been supplying innovative off-the-shelf catering disposables since 1983. Today, the SolutionWare brand encompasses a wide range of essential foodservice packaging solutions, from hot and cold drink cups and salad and deli containers, to platters, trays and bar accessories, and microwavable and tamper-evident containers.

The SolutionWare brand sits alongside the PrintPac brand which offers a wide range of custom print and bespoke packaging options from drinks coasters to placemats and cutlery sleeves, and the EnviroWare® brand which was established over 17 years ago to deliver exciting and innovative sustainable food and drink packaging.

Ensuring product integrity while enhancing reputations

“Tamper-evident food packaging helps to ensure product integrity by providing a visible indication as to whether the container has been opened or compromised. It also helps to prevent contamination and preserve the quality and freshness of the product,” concludes Nick Burton.

“These new high-clarity rPET packaging solutions ensure excellent product presentation, and whether it is for fresh salads, deli products or sandwiches, the use of tamper-evident packaging in any foodservice business delivers added confidence for consumers. Ensuring tamper-proof protection for food while also specifying packaging which is made from a percentage of recycled material and can be recycled, can also enhance an operator’s reputation.”
