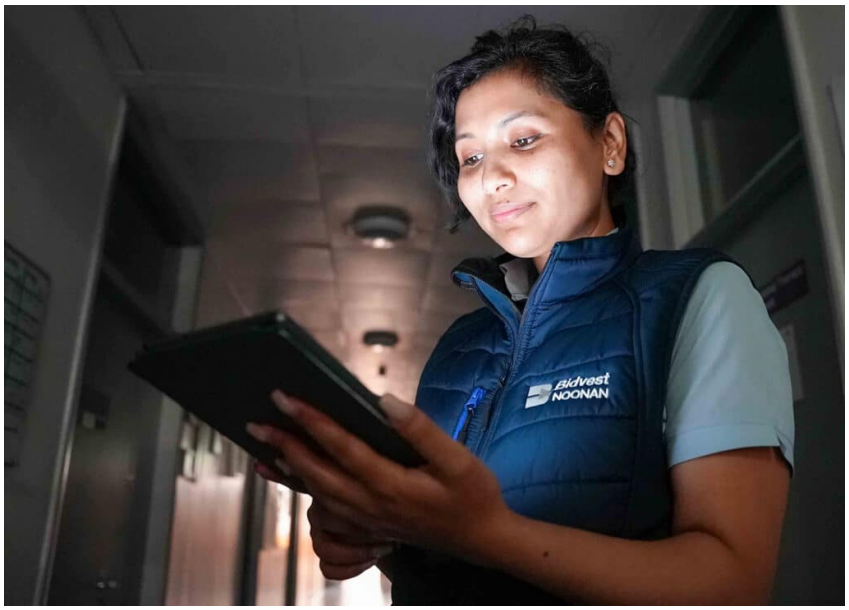
Bidvest Noonan Launches Task: A Cloud-Based Operations Platform for Intelligence-Driven Services

1 year ago



Bidvest Noonan, a leader in the facilities services sector in the UK and Ireland, announces the introduction of Task, a cutting-edge cloud-based operations platform.

Developed for its 27,000-strong workforce, Task was engineered to enhance service processes, employee management, and asset tracking, transforming the way the company operates in the field.

Task will change the way service teams work, allowing them to leverage real-time data generation and analysis to provide actionable insights for continual service improvement. Its comprehensive suite of applications caters to diverse operational needs across the company, ensuring enhanced quality, accountability, and consistency in service delivery.

The platform's capability to attach detailed instructions and guides to tasks ensures consistently high service standards, focusing on safety and professionalism. Cleaning teams can access specific instructions for impeccable results, boosting client satisfaction. Teams can access integrated Risk Assessment and Method Statements (RAMS) and Schedules. Security teams benefit from Task's GPS and NFC technologies, which ensure proof of presence and detailed digital audit trails, thereby offering clients enhanced assurance. The integrated panic button is a highly-valuable safety feature, ensuring swift emergency responses for security personnel.

Task's digital approach to operational documents plays a crucial role in supporting Bidvest Noonan's commitment to environmental sustainability, significantly reducing paper usage and contributing to

broader environmental goals.

Eddie Ingram, Bidvest Noonan Transformation Director comments, “With Task, we’re taking a significant step towards a more efficient, technology-driven future. It’s a standout platform, fit for the data-oriented and innovative company we have become. Task is key in our strategy to transform how we work and lead in our industry.”
