

PTSG to work at up-and-coming area in Birmingham

1 year ago

[Premier Technical Services Group Ltd \(PTSG\)](#) is to deliver fire solutions at a scheme that regenerates a 4.2-acre plot on the south-east edge of Birmingham city centre.

Camp Hill will be a mixed-use scheme that will deliver 550 next generation build to rent homes – a mix of one, two and three bedroom generously sized apartments to create bigger and better homes. Apartments will exceed the minimum size standards required by Birmingham City Council.

The scheme will include around 22,000 square feet of shared internal amenity space. Amenities include a fully equipped gym, rooftop terraces, co-working office space, private dining rooms and a concierge.

Camp Hill is a significant brownfield site and has the potential to mark and support the transformation and regeneration of the Digbeth Creative Quarter and this part of the city.

In this contract, engineers from [PTSG Fire Solutions Ltd](#) will install commercial sprinklers, residential sprinklers and wet risers at the new development. Sprinkler systems are the most effective means of life and property protection available. They are designed and installed to a number of standards, in the UK mainly to BS EN 12845 incorporating the LPCB Technical Bulletins.

Wet rising mains are for use by the fire brigade or other trained personnel. They are installed into new buildings above 50 metres, or in cases where it is difficult to provide a suitable breaching inlet position to a dry riser.
