

## Boon Edam leads retrofit initiative with Canary Wharf Group

1 year ago

**Boon Edam**, a leading global manufacturer of premium entry solutions, is excited to announce the completion of multiple retrofit projects on the Canary Wharf Estate. These projects, undertaken in collaboration with Canary Wharf Group, mark a significant step towards enhancing security, accessibility, and sustainability through the modernisation of legacy revolving doors.

As part of a broader initiative to improve infrastructure and meet evolving security and safety standards, Boon Edam retrofitted the entrance systems of some of London's most iconic commercial buildings. From One Canada Square and 20 Bank Street to 1 Churchill Place and more, these upgrades included the installation of advanced security features such as lockdown capabilities and EN16005 upgrades for compliance with the latest safety standards, ensuring a safe and secure environment for tenants and visitors.

"We are proud to collaborate with Canary Wharf Group in setting a benchmark for urban retrofitting," said Kelly Richardson, National Service Sales Manager at Boon Edam. "Our retrofit solutions not only enhance the security and efficiency of these iconic buildings but also support broader sustainability goals by reducing the need for new materials and construction."

By adopting a retrofit-first approach, Boon Edam and Canary Wharf Group are leading the way in sustainable urban development, reducing the environmental impact associated with replacing entire entrance systems. This approach aligns with the increasing demand for more circular processes in the built environment, contributing to a more resilient and sustainable urban landscape.

Kelly adds, "The demand for retrofitting is growing as businesses recognise the benefits of upgrading their entrance systems without the need for complete replacements. Whether a customer is retrofitting

buildings to improve energy efficiency, increase security or make the space more accessible, there are so many options available to them.”

“Our collective efforts with the Group demonstrate our ability to handle large-scale, complex retrofit projects. I’m proud that we continue to deliver innovative and future-proof entrance solutions that meet the evolving needs of the modern workplace.”
