

Invar Group achieves four ISO standards

12 months ago

Invar Group, a leading independent software developer and integrator of advanced warehouse automation, announces that it has achieved UKAS accredited certification to four key ISO standards – 9001, 14001, 45001 and 27001.

By complying with these four internationally recognised standards, Invar can demonstrate to its customers, and potential customers, that it adheres to the highest standards in Quality Management Systems, Environmental Management Systems, Information Security Management Systems and Occupational Health and Safety Management Systems.

Alex Moore, Integration Director of Invar Group, says: “This achievement demonstrates our commitment to delivering reliable, safe, secure and environmentally sustainable services to our customers. We are now on a global register of accredited business, increasing the scope and reach of our operating potential. Compliance is a major concern for a growing number of businesses and conforming to these standards gives customers the reassurances they need.”

Invar Group, headquartered in Cranfield UK, is focused on delivering complete turnkey warehouse automation solutions using advanced technologies such as industrial robotics, AMR goods-to-person solutions, pick-to-light technology, sortation systems, as well as conventional warehouse automation.

As an independent integrator of warehouse technologies Invar Group is well positioned to offer an unbiased approach to finding the optimum solution. The company has supplied systems to many of the world’s leading brands, such as: SuperDry, Pets at Home and ERIKS, to name but a few.

In March 2024, Invar was acquired by Wincanton, a leading supply chain partner. Find out more:
