

PTSG company makes great strides in sustainability

2 years ago

For a number of years Trinity, part of [PTSG Fire Solutions Ltd](#), has been proactive in implementing sustainability initiatives that have a real and lasting impact on the communities in which its engineers work.

To end Net Zero week (6-12 July 2024), Trinity was delighted to announce that its Heathrow office has achieved Net Zero Carbon for the second year running. Its MoD Aldershot has also achieved Net Zero certification.

Trinity's Net Zero carbon strategy's next focus offices are located in the Midlands and South West, as the company systematically works through all of its locations.

The Trinity Cycle to Work scheme offers incentives to employees who are able to cycle to work. Everyone who can cycle to work is playing a vital part in reducing CO2 emissions, congestion and improving public health and wellbeing.

This year, Trinity has invested in a cardboard shredder at its warehouse. This has seen the removal of all plastic packaging from its logistics operations.

Cardboard shredders provide an efficient means of recycling cardboard but also offer businesses an opportunity to create their own, free eco-friendly packaging materials. As we move towards a more sustainable future, these machines are playing a pivotal role in reducing waste and minimising our environmental footprint.

Trinity is now using bamboo products such as hand towels and toilet paper at its regional offices. Bamboo

products are highly eco-friendly, renewable and a biodegradable material, meaning there is minimal environmental impact.

In June, 19 trees were planted on Trinity's behalf as part of its uniform suppliers initiative to reduce CO2 emissions. By absorbing carbon dioxide from the atmosphere, trees help to combat climate change.
