

[Bidvest Noonan Launches TwinSpace, its advanced Digital Twin Solution](#)

2 years ago

[Bidvest Noonan](#), a leading FM services provider across the UK and Ireland, has launched *TwinSpace*, its new digital twin technology solution. *TwinSpace* provides clients with 3D virtual replicas of their facilities to improve training, project management, occupancy planning, and more.

TwinSpace is gaining fast traction, particularly in sectors where training and space utilisation are critical. Its accurate 3D models of facilities allow teams to complete site-specific training remotely. New team members can familiarise themselves with the facility before arriving on-site, ensuring they are well-prepared from day one.

TwinSpace captures precise spatial data to create highly accurate floor plans. These schematic plans include precise measurements and define floor areas within buildings. This level of detail enables more effective planning for work schedules, space management, and optimising resource allocation.

The company's *TwinSpace* technicians can create virtual models for clients within hours, using unobtrusive, lightweight technologies. The models offer an intuitive, user-friendly experience and require minimal onboarding.

Whether visualising a room layout or navigating an entire building, *TwinSpace* simplifies space analysis and decision-making, providing a realistic view without the need for on-site visits. Embedded resources such as PDFs and videos provide detailed instructions and insights for tenants, maintenance teams, and facility managers, improving overall operational efficiency.

Peter Smyth, Director of Technology and Innovation, said, "*TwinSpace* enhances training, supports space planning, and enables better operational decision-making. It equips teams and managers with the critical

information they need, whether planning projects or managing day-to-day tasks. This tool is a valuable asset for our customers across all sectors.”

Cormac Sheils, Chief Operating Officer, added, “*TwinSpace* has already made a significant impact, with clients seeing real improvements in training efficiency, space management, and decision-making. I’m confident that *TwinSpace* will continue to deliver exceptional value for our customers.”
