

PTSG completes glazing project on the Isle of Man

12 months ago

[Premier Technical Services Group Ltd \(PTSG\)](#), via component company Pendrich Height Services Ltd, has completed another successful complex glazing replacement on the Isle of Man.

PTSG, via its [Building Access Specialists](#), delivers a great many glazing solutions for clients in all sectors, from basic sealant repairs to large-scale replacement. As experienced practitioners, PTSG's specialists install and replace glazing in complex locations such as atriums, canopies and high-rise buildings.

PTSG also has a fleet of specialist access plant equipment, enabling its engineers to react quickly and at the most competitive prices. This includes a 24-hour emergency service – everything from boarding up damaged glazing, to removing loose capping and frameworks. That gives customers peace of mind that they are in safe hands at all times, allowing them to continue with business uninterrupted.

In this latest project on the Isle of Man, PTSG's team utilised a site overhead crane to hoist the replacement glazing into the required area. Rope access techniques were then used to transfer the 3.5m x 1.7m unit past structural steelwork and into position.

The client was delighted with the speed, professionalism and cost of the result.
