

Bradshaw's Goupil Vehicles to Take Centre Stage at Fleet & Mobility Live

2 years ago

[Bradshaw EV](#), which since 1976 has grown to become the UK's leading supplier and manufacturer of electric utility vehicles, is set to exhibit its increasingly popular Goupil range at Fleet & Mobility Live on Stand No. C30.

Bradshaw EV has been at the forefront of the sweeping shift towards electric vehicles over the past four decades, with the rising popularity of its all-electric Goupil range within the private and public sector being a personal testament to this seismic change.

As organisations across the UK look to drive down emissions and integrate zero-emission vehicles into their fleets, the Goupil vehicles now feature across a wide range of industries, including last-mile, waste management, and site maintenance.

Versatile in their design, the Goupil vehicles can be equipped with lead acid or lithium batteries and can each be tailored directly to the customer's requirements - which is furthermore complemented through their newly formed relationship with vehicle conversion and racking specialists, Bott - who fitted out a G4 Box Van with a state-of-the-art racking system, dubbed the Vario3.

Also on display is the new Goupil G4 Refuse Collection Vehicle (RCV), which is expertly designed for satellite operations, efficient discharging of waste into larger collection vehicles, streamlining waste collection rounds, and reducing overall time on the streets. Equipped with an aluminium body and a robust bin lift system, Bradshaw's G4 RCV offers a sustainable and efficient alternative to traditional refuse collection methods.

The G4 road vehicles on offer include pick-ups, vans and waste collectors, all designed to transport people

and equipment for a variety of different applications. With an operational range of 101 miles and maximum speed of 31mph, the G4s can be equipped with an array of body types to cater to the customer's specific requirements and feature a safe and secure cabin as well as both left and right hand drive options.

Each vehicle within the range also comes with the added benefit of being able to be charged via a typical 3-pin plug socket, removing the need for investment into expensive charging infrastructure.

Ramsy Labassi, Marketing Manager at Bradshaw Electric Vehicles commented: "We're excited to be showcasing our Goupil range at Fleet & Mobility Live, an event that

highlights the challenges fleets face today and the innovative solutions available to overcome them.

"Our Goupil range has grown in popularity in recent years, as organisations across the public and private sectors look to integrate reliable, zero-emission options within their fleets to assist in driving forward their sustainability plans, without compromising on operational efficiency.

"The Goupils' versatility and ability to be customised for specific tasks has made it a popular choice across a wide variety of sectors from facilities and site management to waste collection and we're very much looking forward to showcasing their advantages to visitors at the show."
