

Compliance Group Announces Merger with Electrical Test Midlands

8 months ago

[Compliance Group](#), the UK's leading provider of integrated safety and regulatory compliance services across electrical, fire, and water sectors has joined forces with Electrical Test Midlands (ETM), a leading specialist in electrical testing and compliance with over two decades of expertise.

This latest move marks Compliance Group's second addition to its electrical testing division this year after Intersafe joined the Group back in April, underpinning the organisation's commitment to comprehensive service delivery and specialised expertise across all three of its verticals.

Established in 2001, ETM has a proven track record in delivering high-quality electrical compliance services across the UK. The company's offerings – spanning fixed wire testing, portable appliance testing (PAT), and emergency lighting installation – have cemented its reputation for precision, efficiency, and client-focused service.

Phil Campion, Managing Director of Compliance Group Electrical commented: "ETM brings an exceptional level of technical skill, a commitment to customer service, as well as shared values of responsibility and sustainability. We are excited to welcome them into Compliance Group's Electrical Division and further strengthen our position in the electrical safety and testing space and offer more comprehensive services to our clients across multiple sectors."

In a joint statement, Richard and Nadine Jones, founders of ETM added, "Joining Compliance Group is an incredibly exciting step for us and for our clients. Our commitment to safety, client service, and sustainable practices will continue to grow and evolve with Compliance Group's support."

This merger underscores Compliance Group's commitment to sustainable growth through strategic partnerships with quality-focused businesses in the fire, water, and electrical compliance sectors.

Compliance Group's unique, decentralised operating model supports local expertise within each division, while central resources fuel innovation and expansion, helping ensure the highest service standards.
