

Simon Wells appointed as phs Wastekit's National Operations Manager

9 months ago

[phs Wastekit](#) has appointed a new National Operations Manager as the business, which is a market leader in waste management solutions, continues to grow.

Simon Wells, who joined phs Wastekit in 2017, brings decades of experience in engineering, waste management and environmental technology to his new role.

With over 20 engineers and supervisors under his responsibility, Simon will be running day-to-day operations as well as managing health and safety, customer service, team development and sales team liaison.

Jason Smith, Managing Director of phs Wastekit, said: "Simon has been an important part of our engineer team in various roles over the last seven years. He has a meticulous eye for detail and is a fantastic solution finder. He has an in-depth understanding of the business, our customers' needs and the technology, making him ideally positioned to run operations nationally. We know the team will continue to go from strength-to-strength with his support."

Speaking about his new role, Simon Wells said: "Wastekit is a fantastic company to work for and this is my next step on my journey with the business. We are all about supporting customers on their sustainability journey, reducing their waste management costs and improving their environmental performance – something I feel passionately about.

"My new role is an opportunity to improve on and nurture those business ambitions and further develop our incredible operations team. I believe in attention to detail and that even the smallest improvements add to the big picture."

phs Wastekit is one of the UK's leading suppliers of baler and compactor machines, which help businesses reduce their impact on landfill, decrease waste collection costs and free up valuable space. Baled cardboard and plastic can also create an additional revenue as bales can be sold to recycling companies for reuse or resale.

With over 35 years of experience, it also provides valuable insights and training programmes that enable its customers to prioritise sustainable practices and maximise the benefits of waste management solutions, benefitting the planet and the business.
