

Step Into an Engineer's World: Hands-On Innovations in Action

9 months ago

The [Metcor Group](#) are inviting visitors to Anticipate London's [Facilities Show at the ExCel Centre](#), to take a glimpse into the daily lives of their engineers, holding several hands-on demonstrations and workshops that highlight techniques in drainage, pump and ev charger systems.

Anglo Pumps will be taking visitors inside a pump, and featuring an engineer refurbishing an old worn pump back to good-as-new, restoring performance and extending its life, saving costs and reducing waste. They'll also have on show some of the latest state-of-the-art smart pump technologies that boost efficiency, offering smarter solutions for water and wastewater management.

Metcor Environmental has (literally) cutting-edge equipment that engineers use to clear blockages quickly and effectively, ensuring minimal disruption, plus also some diagnostic technologies, such as CCTV probes.

Aylesford Electrical is demonstrating an EV charger on the stand, providing visitors with a closer look at how electric vehicle charging installations support businesses in transitioning to cleaner energy. Their experts will explain the practical benefits, from reduced emissions to long-term savings, and how we tailor installations for seamless integration.

These engaging and informative demonstrations are on Stand FM2611 from December 2nd to 4th – Metcor Group is planting a tree for every visitor [booking an advance appointment](#) or a free site survey, and they are also entered into a draw for a luxurious Fortnum and Mason Hamper.
