

Water treatment works tap into PTSG's expertise

9 months ago

[Premier Technical Services Group Ltd \(PTSG\)](#) has been contracted to deliver specialist electrical services at a proposed modern, low carbon waste water treatment plant in Cambridge.

Anglian Water's vision goes beyond just building a new plant. It isn't simply about moving an old facility to another location; the facility will better serve the community and environment for years to come, one where waste water becomes a valuable resource.

The treatment plant, as well as being operationally net zero carbon, will be energy neutral. It is designed to adapt to changing social and environmental priorities, increasing resilience to storm flows and flooding and provide a long-term solution to how we best treat waste water for a growing Greater Cambridge population.

In this contract, engineers from [PTSG Electrical Services Ltd](#) will install a brand-new lightning protection system to protect the new facility and all its users in the event of an electrical storm.

PTSG is one of Europe's leading providers of specialist services, working on buildings in all sectors, inside and out, high and low, to keep them safe, clean and compliant in all areas. Its teams form close collaborative working relationships to become extensions of its clients, from principal contractors in construction and FM to public sector bodies and end-user consumer brands.
