

[STIEBEL ELTRON Launches New Freestanding Convector Heater – CNS LCD Move](#)

1 year ago

STIEBEL ELTRON UK has unveiled an innovative new portable electric heater designed with safety, style and convenience at its heart.

The **CNS 2000 Plus LCD Move** brings to the market a freestanding convector heater, offering a blend of high-performance heating and sleek design, with simple programming and precise control via its large, easy-to-read, LCD screen.

CNS 2000 Plus LCD Move boasts a range of smart features, including open window detection, a weekly time switch with adaptive control, and programmable comfort settings that allow users to customise their heating schedule.

Available in both black and white, the CNS 2000 Plus LCD Move caters to a wide variety of interior styles. The stainless steel heating element and steel fins, as well as the high quality manufacturing and finish, ensure maximum enjoyment from this premium design product.

The heater is ideal for delivering a fast boost of heat with its 2kW power output wherever it is needed. The folding handle means the unit can easily be carried from one location to another, even when warm.

Safety has also been prioritised in its design, with the product holding TÜV-certification, and being equipped with stable anti-slip feet to offer safe operation, as well as a pendulum switch which turns off the heater in the instance of it being tipped over and an electronic temperature cut-off sensor monitoring the device permanently during heating.

The product's launch comes as STIEBEL ELTRON UK continues to drive the renewable heating sector forward, with the company developing new and innovative technologies to expand its product range and provide sustainable solutions for customers across the UK.

Mark McManus, Managing Director of STIEBEL ELTRON UK, said: "At STIEBEL ELTRON, we're always looking at how we can innovate and enhance the customer experience. We're pleased to say the CNS 200 Plus LCD Move ticks all the boxes in this regard.

"Providing customers with both style and functionality, it offers a portable heating solution that is efficient, safe, and easy to use. While its sleek design and robust performance makes it an excellent addition to our range of electric heating products.

"For anyone who is interested in a portable electric heater, or any other renewable heating products, we would encourage them to get in touch."

Founded in 1924, STIEBEL ELTRON has a long history of providing high-quality, sustainable products for residential and commercial buildings. The launch of the CNS 2000 Plus LCD Move underscores the company's dedication to innovation, quality, and energy efficiency.
