

PTSG adds to its portfolio of access systems

6 months ago

Premier Technical Services Group Ltd (PTSG) has added Vdeck to its already large and growing portfolio of access solutions.

Vdeck is a suspended work platform. This unique system can be installed to form hard-standing deck platforms where access is an issue, or the use of scaffolding is not possible. This system is quick to assemble and effective to use by the Group's IRATA-trained (Industrial Rope Access Trade Association) engineers in delivering contracts on bridges and roof soffits.

Work Areas include: Offshore Helidecks; Offshore Underdecks; Offshore Sub-Stations; Pipe Bridges; Pipe Racks; Bridges; Cranes; Tanks; Conveyor Belts; Jetties and Wharves.

PTSG has achieved a strong reputation in the industry sectors within which it operates for being able to access all parts of buildings to deliver specialist services. Its engineers routinely use rope access (or abseil), MEWPs, scaffolding and ladders, as well as its unique lateral access system. This allows specialist services to be carried out to the underside of large roofs while normal operations continue below, often replacing the need for more costly alternatives.
