

PTSG's MPF Fire Extinguisher Ignites Industry Excitement – A True Game-Changer in Fire Safety

1 year ago

The groundbreaking MPF Portable Fire Extinguisher, launched just two weeks ago by the team at Trinity (part of [PTSG](#) Fire Solutions Ltd), has sparked exceptional industry interest and enthusiasm. Major organisations across multiple sectors—both in the UK and Europe—are eager to explore this revolutionary fire safety innovation.

Developed by Trinity in collaboration with LifeSafe Technologies, the MPF Portable Fire Extinguisher is engineered to tackle virtually all fire types, including the notoriously challenging Lithium-ion battery fires. This unmatched versatility fills a critical gap in the market, providing a single, powerful, and efficient solution for diverse fire hazards.

Richard Castle-Smith, Head of Fire Suppression at Trinity Fire & Security Systems, shared his thoughts: “The MPF delivers incredible results – controlling and extinguishing fires with remarkable speed and efficiency.”

Why the MPF is a Game-Changer

- Broad-Spectrum Effectiveness – Extinguishes Class 34A, 34B, 75F, Di-electric 1000v, and Lithium-ion fires.
- Environmental Compliance – Anticipates upcoming PFOA foam extinguisher bans (effective July 2025) and future PFAS restrictions, making it the sustainable choice for forward-thinking organisations.

□ Operational Efficiency - Eliminates the need for multiple extinguisher types, reducing costs and simplifying maintenance.

The overwhelming response to this launch underscores the MPF's potential to transform fire safety standards worldwide. We invite organisations to connect with us to explore how the MPF can elevate fire protection strategies and contribute to a safer, more sustainable future.
