

ABM Strengthens Its Transport Expertise With Facilities Management Contract at Edinburgh Airport

8 months ago

ABM, a leading provider of facility, engineering, and infrastructure solutions, has been awarded a three-year contract by Edinburgh Airport. The contract is for the delivery of facilities services across its airport estate, including the terminal, corporate offices and contractor buildings.

This partnership highlights the success of ABM's strategic efforts to expand its facilities management expertise in the aviation sector, where it already has a strong presence delivering services such as secure cabin cleaning, ground handling, special assistance, bussing, air side cargo management, security, and passenger experience.

A key differentiator in ABM's successful bid was the integration of its proprietary innovative smart cleaning and service intelligence platform, ABM Connect for Aviation. Designed and built in-house, ABM Connect for Aviation, uses real-time data and intelligent automation to allocate resources and measure cleaning quality, transforming how ABM drive efficiency and service delivery.

The new contract further strengthens ABM's relationship with Edinburgh Airport, complementing the seasonal passenger experience services it currently provides from May through to October. It also expands ABM UK and Ireland's growing transport portfolio, which includes partnerships with 17 airports, over 40 airlines, Transport for London and Dublin Bus.

The contract demonstrates a widening of ABM's portfolio of services developed to provide all customers with a best-in-class experience across transport – including aviation, rail, buses and ports.
