

Aggreko strengthens its energy solutions offering with renewable energy developments

1 year ago

Aggreko has strengthened its energy solutions offering in Europe with the formation of a team dedicated to developing large scale renewable energy projects, working with landowners and industry to increase the amount of clean energy produced in Europe.

Led by Jon Crouch, Commercial Director of IPP Solutions, Europe, the team are delivering renewable generation for clients either on site, by private wire connection or through commercial arrangements like 'energy as a service' and corporate power purchase agreements, removing the need for capital outlay.

Working predominantly with the commercial and industrial sectors, Aggreko offers renewable turnkey solutions having the capability to develop, build and operate generation assets with clients paying for energy as they use it.

Entering into a Power Purchase Agreement with a credible counterparty such as Aggreko gives customers the ability to control their energy cost and supply over periods from 10 to 20 years. Energy intense industries can ensure they have a reliable power supply, lock in predictable costs regardless of fluctuating market prices and they can be sure their energy supply is from renewable sources.

Speaking about this expanded offering Jon Crouch said "Balancing ESG goals alongside commercial success is putting businesses under extreme pressure, which is why many are looking for more sustainable energy procurement methods".

"Bespoke agreements can be complex and lengthy to establish, and Aggreko is able to operate as a

trusted partner making the process as simple as possible for clients and replicating how we work with clients regarding their shorter-term bridging solution needs”.

Offering enhanced energy solutions that bring renewable technologies to clients in more flexible ways—forms part of Aggreko’s sustainability framework, Energising Change. With substantial investment in capability and technology, Aggreko is committed to playing a key role in the development of a renewable infrastructure across Europe

Mr Crouch adds “We know that the pressure to accelerate the energy transition is greater than ever, and companies must balance this with their commercial success at a time when costs are high. By working with a strategic partner like Aggreko, who has a track record of delivery, customers can meet their energy aspirations whilst controlling costs through long term agreements and procuring a reliable source of power for their business”.
