

PTSG delivers specialist fire door services for leading environmental research institute

12 months ago

[Premier Technical Services Group Ltd](#) (PTSG) has been appointed to provide specialist fire safety services at the Edinburgh site of a globally respected independent environmental research organisation.

The institute, which operates across four UK sites, is recognised for its contribution to environmental science and innovation. PTSG Fire Solutions Ltd began its work at the Edinburgh facility with a comprehensive fire door inspection. Following the assessment, the team has been tasked with delivering both remedial and replacement works in line with the BM Trada certification scheme.

Fire door compliance remains a key priority across all sectors. With over 40,000 building fires reported annually in the UK, ensuring that passive fire protection measures such as fire doors are regularly maintained is vital to safeguarding life, property and reputation. In addition to enhancing safety, compliant inspections and repairs help duty holders maintain a robust audit trail to demonstrate due diligence.

PTSG supports a wide range of clients in maintaining fire safety compliance, including housing associations, local authorities, NHS trusts, universities, and critical infrastructure facilities. The Group's repairs-first ethos focuses on delivering cost-effective, practical solutions that prioritise safety without unnecessary expense.

This latest contract underlines PTSG's reputation as a trusted partner in the delivery of specialist fire safety services, helping organisations meet their statutory obligations while protecting people and assets
