

PTSG engineers deliver high-quality lightning protection services at University of East Anglia

1 year ago

Specialist engineers from [Premier Technical Services Group Ltd](#) (PTSG) have successfully completed a planned preventative maintenance (PPM) project at the University of East Anglia (UEA), reinforcing the Group's long-standing partnership with the leading research institution.

The project, carried out by two of PTSG's experienced lightning protection specialists, involved the annual inspection and testing of the university's lightning protection systems to ensure full compliance and operational integrity.

Located on a 360-acre campus in Norwich, UEA is one of the UK's most respected research universities, with a broad academic offering across four faculties and 26 schools of study. The safe operation of its facilities is a key priority, and PTSG's engineers were praised for their professionalism and efficiency.

The University's Contract Supervisor commented: "I just wanted to email you to say how impressed I was with the professionalism of PTSG's team (Rob & Jack Phelps). They were very friendly, courteous and communicative and worked hard as a great team whilst on site. Thank you two for your help."

PTSG has a long-established relationship with the University of East Anglia, having delivered a range of specialist electrical services over the years, including repairs and system upgrades.

This latest project adds to PTSG's extensive portfolio of lightning protection work across the UK's education sector and highlights its reputation for delivering high standards of safety, compliance and customer service.

With expertise across multiple disciplines, including electrical compliance, fire solutions, and façade access, PTSG continues to be a trusted partner for universities and public institutions nationwide.
